

**BIOPSY  
AFTERCARE INSTRUCTIONS**

- Cleanse the area gently with soap and water daily until the biopsy is healed.
- If eye ointment was prescribed, apply a thin layer to the area daily for 5 days.
- There may be mild discomfort shortly after the procedure once the anesthetic wears off. If you have pain, you may take Tylenol (acetaminophen).
- Avoid wearing eye makeup or concealer near the biopsy site until it has completely healed.
- It is not advisable to swim in the ocean or pool until the site has completely healed. It is an open wound and inadvertent contaminants in the water may lead to infection.
- If your biopsy was sent to pathology, you will be contacted in approximately 5-7 days with your test results.
- It is normal for the site to be pink/red and a little tender while it is healing.
- If any signs of infection occur (redness, swelling, heat, increased pain or yellow discharge) please contact the office immediately.

*If you have any questions or concerns, please contact our office at (561) 845-6500*
